

MARKED-UP VERSION OF THE AMENDED CLAIMS:

1. (currently amended) The cover of the container, especially of vacuum receptacle for storage of foodstuffs, in the form of a shell bulged upwards and featuring a vacuum valve is characteristic in that it has the hollow (2) [[/2/]] with the elliptical outline pointed towards the inside of the container; the hollow has the spherical projection (3) [[/3/]], pointed upwards, and the projection has a cylindrical cavity (4) [[/4/]] with the opening (5) [[/5/]] housing the valve head (6) [[/6/]], wherein the valve head (6) has the form of a circular plate (7) attached in the middle to a cylindrical stem and wherein the cylindrical stem is moveably supported in the opening (5).
2. (currently amended) The cover of the container, as provided in claim 1, is characteristic in the valve head (6) ~~/6/ has the form of a circular plate /7/~~ and has an edge (8) [[/8/]] with a triangular outline, cooperating with the gasket (9) [[/9/]] of the valve, wherein the head valve is installed loosely in the opening (5) [[/5/]] by means of the sleeve (10) [[/10/]] ending with the flange (11) [[/11/]] with distancing projections in the form of radial ribs.
3. (currently amended) The cover of the container, as provided in claim 2, is characteristic in that the other end of the head valve (6) [[/6/]] has the pin (12) [[/12/]] extending beyond the plate (7) [[/7/]].

4. (currently amended) The cover of the container, as provided in claim 1, is characteristic in that the lower of the valve is covered with the bonnet (13) ~~[[/13/]]~~ with distancing ribs (14) ~~[[/14/]]~~.

5. (new) A cover for a container comprising  
a shell bulged upwards;  
a hollow (2) having an elliptical outline pointed downwards and towards an inside of the container and disposed in said shell;  
a spherical projection (3), pointed upwards, and disposed in the hollow;  
a cylindrical cavity (4) disposed in the spherical projection (3);  
an opening (5) in a bottom of the cylindrical cavity;  
a valve head (6) formed as a circular plate (7) attached on a lower side in a middle to an end of a cylindrical stem and wherein the cylindrical stem is moveably supported in the opening (5).

6. (new) The cover according to claim 5 further comprising  
a gasket (9) disposed on the bottom of the cylindrical cavity;  
an edge (8) disposed on the circular plate (7), having a triangular outline for engaging with the gasket (9), wherein the gasket (9) and the edge (8) disposed on the circular plate (7) form a vacuum valve,

a sleeve (10) ending with the flange (11) with distancing projections in the form of radial ribs, wherein the head valve is installed loosely in the opening (5) by means of the sleeve (10).

7. (new) The cover according to claim 6 further comprising a pin (12) disposed on the circular plate (7) on an upper side of the circular plate (7) disposed opposite to the cylindrical stem and wherein the pin (12) extends beyond the circular plate (7).

8. (new) The cover according to claim 5 further comprising a bonnet (13) disposed below a bottom end of the cylindrical stem; distancing ribs (14) attached to the bonnet (13).

9. (new) The cover according to claim 6, wherein the gasket (8) is ring shaped, wherein the gasket (9) surrounds the cylindrical stem, wherein the gasket (9) is seated at the bottom of the cylindrical cavity (4) and wherein the pin (12) is located completely inside the cylindrical cavity (4) while the valve is in a closed position.

10. (new) The cover according to claim 6 wherein the spherical projection (3) includes an inner ring and an outer ring and wherein a free end of the bonnet engages between the inner ring and the outer ring.
11. (new) The cover according to claim 5 wherein the cylindrical stem and the circular plate (7) are disposed axially aligned with the cylindrical cavity (4) and wherein the edge (8) of the circular plate (7) is axially aligned with the gasket (9)
12. (new) A cover for a container comprising
- a shell bulged upwards;
  - a hollow (2) pointed downwards and towards an inside of the container and disposed in said shell;
  - a spherical projection (3), pointed upwards, and disposed in the hollow;
  - a cylindrical cavity (4) disposed in the spherical projection (3) and open on an upper side;
  - an opening (5) in a bottom of the cylindrical cavity;

a valve head (6) formed as a circular plate (7) attached on a lower side in a middle to an end of a cylindrical stem and wherein the cylindrical stem is moveably supported in the opening (5);

a gasket (9) disposed on the bottom of the cylindrical cavity;

an edge (8) disposed on the circular plate (7) and having a triangular cross-section for engaging with the gasket (9), wherein the gasket (9) and the edge (8) disposed on the circular plate (7) form a vacuum valve.

13. (new) The cover according to claim 12 further comprising a sleeve (10) ending with the flange (11) with distancing projections in the form of radial ribs, wherein the head valve is installed loosely in the opening (5) by means of the sleeve (10).

14. (new) The cover according to claim 12 further comprising a pin (12) disposed on the circular plate (7) on an upper side of the circular plate (7) disposed opposite to the cylindrical stem and wherein the pin (12) extends beyond the circular plate (7).

15.(new) The cover according to claim 12 further comprising a bonnet (13) disposed below a bottom end of the cylindrical stem;

distancing ribs (14) attached to the bonnet (13)..

16. (new) The cover according to claim 12, wherein the gasket (8) is ring shaped, wherein the gasket (9) surrounds the cylindrical stem, wherein the gasket (9) is seated at the bottom of the cylindrical cavity (4) and wherein the pin (12) is located completely inside the cylindrical cavity (4) while the valve is in a closed position.

17. (new) The cover according to claim 12 wherein the spherical projection (3) includes an inner ring and an outer ring and wherein a free end of the bonnet engages between the inner ring and the outer ring.

18. (new) The cover according to claim 12 wherein the cylindrical stem and the circular plate (7) are disposed axially aligned with the cylindrical cavity (4) and wherein the edge (8) of the circular plate (7) is axially aligned with the gasket (9)

19. (new) The cover according to claim 12 wherein the hollow (2) has an elliptical outline.
